INTRODUCTION

Green Buildings Facility Management LLC is one of the leading companies which specialized in Air Duct cleaning, Water Tank cleaning and Pest Control in Abu Dhabi, United Arab Emirates, both for residential and commercial properties. With the use of top of the line equipment, which includes powerful rotary brushes, high-powered air pressure machines, and powerful vacuums, you can rest assured that you and your family will breathe cleaner air and use cleaner water. Our well-trained and experienced technicians will make sure that you are completely satisfied before they leave.

Table of Contents

- ☐ Introduction
- ☐ Safety and PPE
- ☐ Equipment Used
- ☐ Cleaning Agents used
- ☐ Why Green Building uses Aqua Kleene
- ☐ The Process of Cleaning
- ☐ WHO standards followed by UAE

CLEANING AGENTS USED

Green Buildings uses Aqua Kleene, a cleaning agent specifically formulated for water tank cleaning. Aqua Kleene is a Biocide disinfectant cleaner for water tanks and it is bio-degradable. The detergent is manufactured in the United Arab Emirates.

OBSERVATIONS

All tanks were in good condition. We did not find any leakage in the tanks.
Water was at minimum level.
Floater was cleaned and disinfected
There was no water interruption in the premises during cleaning

SAFETY & PPE

Larger water tanks and reservoirs are confined spaces and many of the areas they are located can also be enclosed. To minimize the risk, our teams carry and use gas detectors to ensure that a safe environment is maintained. Forced ventilation is used where there may be a question regarding air quality in the water tank or surrounding area. Our team also has all required PPE such as gloves, helmet, safety harness, and boots. A First Aid kit is also provided for the team for minor abrasions or small cuts that may occur on the site. In case of working in confined space, we shall seek permission from EHS Office in the municipality. We shall arrange the EHS required as per the EHS Regulatory Instrument – Code of practice No. 27.0 – Confined Spaces. PPE provided for the employees shall be in accordance with the EHS Regulatory Instrument – Code of practice No. CoP 2.0

- ☐ **Helmets** protect the head against injury.
- ☐ **Goggles** are used when chemicals are applied and cleaning is in process so that cleaning agents do not splash into the eye.
- ☐ **Safety Harnesses** are worn when employees work at heights.
- ☐ **Boots** are used for protection of feet from debris while inside the tank.
- ☐ **Gloves** will protect the hands when chemicals are being applied and walls are scrubbed.
- ☐ **First Aid kit** is used for treating minor abrasions and cuts.

EQUIPMENT USED

Green Buildings uses modern, safe, and inspected equipment to clean water tanks. Our equipment includes such things as Submersible camera, pumps (petrol and electrical), high pressure cleaners, etc.

- ☐ **Electric pumps:** These are one to one and half (1-1.5) horsepower electric pumps that are normally used in Polyethylene and GRP tanks. The discharge rate for this pump is 75 US gallons per minute. The electric cable is water tight with extensions made using a 3M water resistant insulation tape.
- ☐ **High Pressure Machine:** The interior surface of the water tanks is cleaned using high pressure pumps. We have various high-pressure pumps for tanks depending on their size. The pumps rinse the sediment and cleaning agent from surfaces. The pressure of the pumps range from 2.5 bar to 12.0 bar
- ☐ **Ventilation fans** to circulate and replenish fresh air into the water tank.
- ☐ **Industrial Sockets** is use to eliminate electrical risk.

LABORATORY WATER SAMPLES

The periodic sampling and testing of water sources for the presence of **Legionella** bacteria is a valuable means of demonstrating to the regulator, clients, colleagues and other important stakeholders that adequate control over a water system is being maintained and that levels of Legionella bacteria are kept within safe limits.

Many contract testing companies specialize in **Legionella** management and testing of water. Legionella is typically isolated from **water by filtration followed by heat or acid treatment**, then plated onto non-selective BCYE agar, and then with a selective GVPC (cycloheximide) agar. Microbiological analysis is the **most effective way to detect faecal contamination in water**. Obtrusively, faeces of humans, animals, birds and livestock enters the water and makes it unfit for consumption. Microbiological analysis of water is an important aspect of water testing.

Microbiological water analysis is a **method of analyzing water to estimate the numbers of bacteria present and to allow for the recovery of microorganisms in order to identify them**. The method of examination is the plate count. ... When it is desirable to obtain a specific bacterial species, a selective medium can be used.

ACTIVE INGREDIENTS OF AQUAKLEENE AC DUCT CLEANER CATIONIC & NONIONIC SURFACTANT

What are cationic used for?

Cationic detergents are more strongly absorbed on fabrics that are anionic or nonionic surfactants. They are used as wetting agents, fabric softeners, bacteriostats and emulsifiers. Example of cationic detergents are quaternary ammonium compounds, benzalkonium chloride and cetyltrimethylammonium bromide.

Which is an example for cationic surfactants?

A common example of cationic surfactant is alkyl ammonium chlorides.

What is the purpose of surfactants?

The main functions of surfactant are as follows: (1) lowering surface tension at the air-liquid interface and thus preventing alveolar collapse at end-expiration, (2) interacting with and subsequent killing of pathogens or preventing their dissemination, and (3) modulating immune responses.

What is the purpose of surfactants?

The main functions of surfactant are as follows: (1) lowering surface tension at the air-liquid interface and thus preventing alveolar collapse at end-expiration, (2) interacting with and subsequent killing of pathogens or preventing their dissemination, and (3) modulating immune responses.

What is alkyl dimethyl benzyl ammonium chloride used for?

N-alkyl C12-C14 dimethyl ethyl benzyl ammonium chloride is added to products to function as a cleaning agent, or as antimicrobial agents in disinfecting cleaning products.

What is ammonium chloride used for cleaning?

Quaternary ammonium chloride (quat) is an active ingredient in disinfectants that are used widely throughout the cleaning industry. These disinfectants are popular because of their effectiveness against germs, bacteria and viruses; their relatively low toxicity at proper dilution; low odors; and long shelf life.

What are nonionic surfactants?

Nonionic(no-charge)

Nonionic surfactants contain no charge. They are commonly found in laundry and dishwasher detergents. They are the second most widely used surfactants after anionic. These molecules have no charge and so they are less likely to form a 'soap scum' in hard water.
